

Aerial Drone 3D Modeling

EEPCON will satisfy all your 3D Modeling needs. Our team of certified pilots are rigorously trained to meet the Safety and Quality demands of our customers. EEPCON utilizes state of the art system and sensors in order to capture high quality data and to create best 3D Modeling for our end user. With our experience, you can guarantee our teams are ready to meet your service requirement.

Drone mapping creates stunning 3D models, large orthographic photo imagery and elevated models of structures. Aerial Drones have fast become a revolutionary new way of conducting surveys and inspections across the UK and now with 3D Modelling and Mapping software, EEPCON Aerial Services can take drone mapping to a new level.

Drone mapping is the process of using aerial drones to conduct photography in a style known as photogrammetry. Photogrammetry is the science of taking measurements from photographic evidence. This can be processed as a map, measurement or virtual model of a real world location or object.

Our Services

With EEPCON, we provide a high quality photogrammetry based mapping and 3D modelling service for customers who are looking for a professional drone service provider.

Benefits

Drone mapping has significant benefits in industries ranging from construction to agriculture, mining to infrastructure and real estate.
